#### **DETAILED ACTION**

## Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

#### Claim Objections

Claim 3 is objected to because of the following informalities: the claim contains the limitations of "the respective spacers" in line 3, "the sequence" in line 4, "the opposite sides" in line 6, "the portions" lines 6-7, "the same" in line 8, and "said semiconductor <u>devices</u>" in line 10. There is insufficient antecedent basis for the limitations in the claim. Appropriate correction is required.

### Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 recites the limitation "for each of said semiconductor devices" in line 10.

There is insufficient antecedent basis for this limitation in the claim. The limitation in question is confusing because it seems that there are a plurality of first and second

Art Unit: 2815

semiconductors mounted on a plurality of first and second spacer substrates. Because the is insufficient antecedent basis for the term "each of said semiconductor devices" it is difficult to determine how the spacer substrate is split if there is only one first and second semiconductor mounted on one spacer substrate.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Akihiko (JP 11-112121 A).

Claims 1-3, as far as understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Takahashi et al. (US 6,025,648).

In re claim 1, Takahashi et al. shows (fig. 1) a semiconductor device comprising a first semiconductor comprising a substrate (1 middle), and a semiconductor chip (9) disposed on the major surface of said substrate and sealed with a resin (6 not labeled in the middle); a wiring board (1 bottom substrate), spacers (bump 7 on the bottom)

disposed between said wiring board and said substrate and connecting said first semiconductor to said wiring board electrically; and a second semiconductor (chip 2 bottom not labeled) electrically connected to said wiring board and disposed in the space formed by said wiring board said substrate, and said spacer.

In re claim 2, Takahashi et al. shows (fig. 1) that a plurality (chips 2 on each level) of said semiconductors are disposed on said wiring board.

In re claim 3, as far as understood, Takahashi et al. discloses (fig. 1 and col. 3, line 46 -lines 34) a method of manufacturing a semiconductor device comprising: mounting a first semiconductor (2) on the respective spacers (7) of a spacer substrate (1), formed by with a plurality of spacers for a semiconductor device; mounting a second semiconductor (2 middle) on the opposite sides of the portions of the respective spacers whereon the first spacer has been connected and in the same direction of the first semiconductor, respectively.

Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Karnezos (US Pub. 2004/0113253 A1).

In re claim 1, Karnezos shows (fig. 2) a semiconductor device comprising a first semiconductor comprising a substrate (22), and a semiconductor chip (24) disposed on the major surface of said substrate and sealed with a resin (27); a wiring board (12), spacers (28) disposed between said wiring board and said substrate and connecting said first semiconductor to said wiring board electrically; and a second semiconductor

(14) electrically connected to said wiring board and disposed in the space formed by said wiring board said substrate, and said spacer.

In re claim 2, Karnezos shows (fig. 2) that a plurality (12 and 24) of said semiconductors are disposed on said wiring board.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Shin et al. (US 2004/0175916 A1), Ishii et al. (US 2002/0105091 A1), and Matsunami (US 2004/0175865 A1) also show semiconductor devices having stackable packages with spacers between them.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew E Warren whose telephone number is (571) 272-1737. The examiner can normally be reached on Mon-Thur and alternating Fri 9:00-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Thomas can be reached on (571) 272-1664. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
